

Pradhuman Patel

Chicago, IL | +1 (309) 229-6504 | pd.dev267@gmail.com | github.com/Pd-Patel-dev | linkedin.com/in/pradhuman-patel

Summary

Computer Science student at UIC (May 2027) specializing in AI and full-stack development. Shipped 3 production applications featuring LLM-integrated pipelines, real-time WebSocket infrastructure, and BERT fine-tuning — reducing manual workflows by 60–80%. Seeking entry-level SWE or AI Engineer roles.

Education

University of Illinois Chicago (UIC)

Aug 2025 – May 2027

Bachelor of Science in Computer Science | GPA: 3.68 / 4.0

Relevant Coursework: Data Structures & Algorithms, Machine Learning, Natural Language Processing (NLP), Artificial Intelligence, Software Design, Programming Practicum

Harper College, Palatine IL

Aug 2023 – May 2025

Associates of Science in Computer Science | GPA: 3.72 / 4.0

Relevant Coursework: Programming Fundamentals in C++, Discrete Mathematics, Probability & Statistics

Skills

Programming Language: Python, JavaScript, TypeScript, C/C++, SQL, HTML, CSS, Dart, Java

Frontend: React.js, Next.js, Tailwind CSS, State Management (Redux, React Query), SSR/SSG, Responsive Design

Backend: Node.js, FastAPI, REST API, System Design, Microservices, JWT, OAuth 2.0, RBAC

Mobile: React Native, Flutter, Expo

Testing: Jest, Postman, API Testing, Unit Testing

Databases: PostgreSQL, MySQL, MongoDB, Database Design, Indexing, Query Optimization, Supabase

DevOps & Cloud: Docker, Kubernetes, CI/CD, GitHub Actions, AWS (EC2, S3), GCP, Linux/Unix, API Gateway

ML/AI: LLM, RAG, LangChain, OpenAI API, Hugging Face Transformers, BERT Fine-Tuning, ONNX Quantization, Vector Databases, scikit-learn, NLP

Tools: Git/GitHub, Postman, Figma, Bitbucket, Cursor, Claude Code, GitHub Copilot, Agile/Scrum

Projects

AI-Powered Job Application Email Tracker | Python, scikit-learn, Hugging Face, Gmail API, ONNX | [link](#)

Jan 2026 – May 2026

- Designed and implemented a 3-stage email classification pipeline (rule-based → fine-tuned BERT → LLM fallback) achieving 91% precision across 10K+ labeled samples, reducing false positives by 30–40%.
- Engineered Gmail API ingestion with async pagination and real-time progress streaming via Server-Sent Events (SSE), supporting resumable background workers across 10K+ emails per user with sub-2s initial load.
- Deployed classification logic as a FastAPI microservice with async job queuing and persistent session state, sustaining sub-500ms response times across 50+ concurrent users.
- Fine-tuned binary classifiers (Rejected, Offer) using scikit-learn and Hugging Face Transformers, optimized for production via ONNX quantization, delivering 3x faster inference vs standard PyTorch baseline

ClockInn-Pro: Employee Time Tracking | Python, FastAPI, Next.js, PostgreSQL, JWT | [link](#)

Nov 2025 – Jan 2026

- Developed a full-stack payroll and time-tracking SaaS using FastAPI, Next.js, and PostgreSQL — automating end-to-end scheduling and payroll workflows for teams of up to 50 employees, cutting admin effort by 80%.
- Engineered secure JWT authentication with refresh token rotation, role-based access control, and edge-case scheduling logic, achieving zero auth-related incidents across all tested user scenarios
- Built an automated payroll engine supporting overtime calculations, multi-rate pay rules, and one-click export to PDF and Excel, eliminating manual payroll compilation entirely

Waypool - Ride-Sharing Platform | Node.js, TypeScript, React Native, PostgreSQL, WebSockets, Stripe | [link](#)

Dec 2024 – Feb 2025

- Architected a 3-app ride-sharing platform (REST API, driver app, rider app) in Node.js, TypeScript, and React Native (Expo) with an indexed PostgreSQL schema and connection pooling supporting 500+ concurrent sessions.
- Engineered WebSocket infrastructure for live location tracking, booking updates, and driver-rider messaging, delivering sub-100ms event propagation with Firebase push notifications
- Integrated Stripe Connect for ride payments, platform fee splits, and fully automated weekly driver payouts — eliminating manual reconciliation and saving ~5 hours/week in payout processing.

Experience

Software Engineering Intern

Amitron Corporation, Elk Grove Village, IL

Sept 2024 – Mar 2025

- Reduced PCB job document generation time by 60% by building a React + TypeScript web app integrated with ERP systems, cutting per-job processing from ~3 hours to under 30 minutes for engineering and operations teams.
- Developed Node.js REST APIs exposing normalized ERP data as structured JSON, enabling end-to-end automation across job setup, labeling, and document workflows for engineering and operations teams
- Reduced data inconsistency incidents by 40% by implementing structured validation, error handling, and OOP design patterns across ERP-integrated Node.js APIs.
- Drove end-to-end delivery of 3 internal tooling features — from requirements gathering to production — collaborating with engineering and operations teams and cutting deployment cycle time by 30%.
