

Pradhuman Patel

Chicago, IL | pd.dev267@gmail.com | [Github](#) | [Linkedin](#) | [Portfolio](#)

Summary

Computer Science student at UIC graduating in May 2027 with experience building AI and full stack applications using Python, FastAPI, React, and PostgreSQL. Experienced with RAG, LLMs, vector search, NLP, and machine learning. Seeking entry level AI Engineer or Software Engineer roles.

Education

University of Illinois Chicago (UIC)

Aug 2025 – May 2027

Bachelor of Science in Computer Science | GPA: 3.78 / 4.0

Relevant Coursework: Data Structures & Algorithms, Machine Learning, Natural Language Processing (NLP), Artificial Intelligence, Software Design, Programming Practicum

Harper College, Palatine IL

Aug 2023 – May 2025

Associates of Science in Computer Science | GPA: 3.72 / 4.0

Relevant Coursework: Programming Fundamentals in C++, Discrete Mathematics, Probability & Statistics

Skills

Programming Languages: Python, JavaScript, TypeScript, C/C++, SQL, HTML, CSS, Dart, Java

Frontend: React.js, Next.js, Tailwind CSS, Responsive Design

Backend: Node.js, FastAPI, REST API, JWT, OAuth 2.0, RBAC

Databases: PostgreSQL, MySQL, MongoDB, Query Optimization, Supabase, Prisma

DevOps & Cloud: Docker, Kubernetes, AWS (EC2, S3), API Gateway

ML/AI: LLMs, RAG, FAISS, Vector Embeddings, Hugging Face, OpenAI API, scikit learn, NLP, TF IDF

Tools: Git/GitHub, Postman, Figma, Bitbucket, Agile/Scrum

Projects

RAG Workspace | Python, FastAPI, React, TypeScript, PostgreSQL, FAISS, Hugging Face

Aug 2026 – Present

- Built a document question answering application where users can upload files and ask questions about their own documents using Retrieval Augmented Generation, FAISS, Hugging Face embeddings, FastAPI, React, and PostgreSQL.
- Created a retrieval system that combines vector search, keyword search, query expansion, multiple query searches, result ranking, and context filtering to find useful information from uploaded documents.
- Added source citations, separate FAISS indexes for each user, JWT authentication, caching, retry handling, and health monitoring to improve security and reliability.

Job Application Email Classifier | Python, scikit learn, Pandas, TF IDF, NLP, Joblib

Jan 2026 – May 2026

- Built an NLP email classifier using Python, scikit learn, and TF IDF to sort job related emails into 6 categories including applications, assessments, interviews, offers, and rejections.
- Created a dataset of 1,500 realistic recruiting emails with different companies, job roles, subjects, email formats, and reply patterns to train and evaluate the classification system.
- Compared Logistic Regression, Linear SVM, and Naive Bayes using an 80/20 train and validation split with 5 fold cross validation and macro F1 score to select the best performing model.

ClockInn-Pro: Employee Time Tracking | Python, FastAPI, Next.js, PostgreSQL, JWT

Nov 2025 – Jan 2026

- Built a payroll and employee time tracking system using FastAPI, Next.js, and PostgreSQL that is used across 3 hotels and supports more than 50 employees for scheduling, attendance, and payroll.
- Created JWT authentication and role based access for managers and employees across 3 properties, with separate permissions for scheduling, time records, and payroll information.
- Developed payroll features for overtime, multiple pay rates, and employee hours, with one click export to 2 formats, PDF and Excel, reducing the amount of manual work needed to prepare payroll.

Experience

Software Engineering Intern

Amitron Corporation, Elk Grove Village, IL

April 2026 – Aug 2026

- Built a React and TypeScript application connected to internal ERP data that reduced PCB job document preparation from about 3 hours to under 30 minutes for engineering and operations teams.
- Developed Node.js REST APIs that converted ERP data into structured JSON and added validation and error handling to improve data consistency across job setup, labeling, and document workflows.
- Delivered 3 internal software features from requirements gathering through production while working with engineering and operations teams to automate repetitive PCB manufacturing tasks.
